

CLAIMS:

1. Composition to improve wrinkle resistance in fabrics, comprising:
 - a wrinkle-reducing active ingredient, comprising at least one fusible elastomer, and
 - a liquid carrier for carrying the active ingredient,
- 5 characterized in that the wrinkle-reducing active ingredient further comprises a filler which is at least partly provided with chemically crosslinked particles.
2. Composition according to claim 1, characterized in that the filler consists entirely of chemically crosslinked particles.
- 10 3. Composition according to claim 1, characterized in that the filler is provided with a thermoplast, preferably polymethylmethacrylate (PMMA).
4. Composition according to one of the foregoing claims, characterized in that
- 15 the content of the active ingredient in the liquid carrier is between 2 and 60% by weight.
5. Composition according to one of the foregoing claims, characterized in that the filler content in the active ingredient is between 5 and 50% by weight, preferably between 10 and 20% by weight.
- 20 6. Composition according to one of the foregoing claims, characterized in that the elastomer has a softening temperature between 50 and 150°C in the presence of water.
7. Composition according to one of the foregoing claims, characterized in that
- 25 the composition is provided with additives, preferably a surfactant or a perfume.
8. Wrinkle-reducing active ingredient as used in a composition according to one of the foregoing claims 1 to 7.

9. Cartridge designed for an iron and containing a composition according to one of the claims 1 to 7.
